WISeKey launches WISeID, a secure identity protection application for Apple's iOS based iPhone

03.08.2010 - 10:42 Uhr, WISeKey SA

Geneva (ots) - WISeID for iPhones and iPod Touch provides convenient, easy to use, encrypted storage for your identity credentials.

WISeID's easy to use interface allows users to store their credentials and passwords securely on your iPhone, and easily logon to protected web-sites and communities such as Google, Facebook, Twitter, etc. Users can quickly enter and secure their usernames, passwords, PINs, membership numbers, private notes and other information.

WISeID users who register their application obtain a free digital certificate to prove their identity from WISeKey. All data is stored securely using the AES encryption algorithm with a strong 256-bit key.

WISeID APP can perfectly be combined with a WISeKey Digital Identity to increase the security of the profile and reduce fraud and personal risk.

Future WISeID upgrades will support secure data backup and restore functionality, Trusted Cloud Identification and Storage, user editable groups and data fields and will include a WISeID Advertising tool for mobile advertising aggregators.

More information on WISeID can be found at <http://itunes.apple.com/app/wiseid/id384040842> and WISeID can be purchased at <http://itunes.com/app/wiseid> at the price of \$99 cents.
