WIS@key launches WIS@ID, a secure identity protection application for Apple's iOS based iPhone

Geneva (ots) -

WIS@ID for iPhones and iPod Touch provides convenient, easy to use, encrypted storage for your identity credentials.

WIS@ID's easy to use interface allows users to store their credentials and passwords securely on your iPhone, and easily logon to protected web-sites and communities such as Google, Facebook, Twitter, etc. Users can quickly enter and secure their usernames, passwords, PINs, membership numbers, private notes and other information.

WIS@ID users who register their application obtain a free digital certificate to prove their identity from WIS@Key. All data is stored securely using the AES encryption algorithm with a strong 256-bit key.

WIS@ID APP can perfectly be combined with a WIS@Key Digital Identity to increase the security of the profile and reduce fraud and personal risk.

Future WIS@ID upgrades will support secure data backup and restore functionality, Trusted Cloud Identification and Storage, user editable groups and data fields and will include a WIS@ID Advertising tool for mobile advertising aggregators.

More information on WIS@ID can be found at <http://itunes.apple.com/app/wiseid/id384040842> and WIS@ID can be purchased at <http://itunes.com/app/wiseid> at the price of \$99 cents.
