WIS@key Upgrades WIS@ID, the Swiss Knife of Digital Safety, with Secure Identities and Encrypted Facebook Messaging

Switzerland (ots) -

WIS@key has upgraded and redesigned its WIS@ID Password and Personal Data Protector application, the Swiss Knife of digital safety. WIS@ID version 3S continues to secure Personal Identifiable Information (PII), data which contains unique identity and location details of an individual. WIS@ID 3S has expanded its consumer protection features, including free email certificates for registered users and encrypted data backup on the Cloud.

In addition to the new design of the mobile app, WIS@key launched a desktop version for Mac OSX, making it even easier to add and update account details. A PC version is expected this spring.

WIS@ID 3S offers encrypted messaging to maintain privacy of SMS, emails, and Facebook posts. WIS@key is applying their expertise securing operations with banks and governments to allow WIS@ID to enable safe transactions from within Facebook.

WIS@ID continues to provide a "trusted digital identity." Using its established e-Voting technology, WIS@key is enhancing WIS@ID to combine its strong authentication with social networking platforms to offer a medium for voting and other binding transactions.

WIS@ID uses geo-location to allow check-in to Foursquare. WIS@ID users will soon be able to opt-in to receive targeted deals, focused Facebook connection recommendations. These benefits are offered securely: PII is never communicated to third parties.

WIS@ID stores usernames, passwords, PINs, and account details in a secure vault on a mobile device, iPad, or desktop. WIS@key's military-grade encryption technology means that the information always stays safe even if the mobile device is lost or stolen.

WIS@ID previously hit the top 5 iPhone apps in its category in the U.S.A. and is among the top utility apps worldwide.
